(54) Title: DESIGN SUPPORTING SYSTEM FOR SUPPORTING COMPONENT DESIGN

(57) Abstract: A design supporting system includes a unit that acquires, from a component design supporting program which is executed in a client terminal, component design information including volume information indicative of a volume of a designed component, a unit that generates list information that is indicative of a list of names of usable materials for the component classification corresponding to the designed component, and sends the list information to the client terminal, an acquisition unit that acquires, from the material database, controlled substance information corresponding to the material name that is selected from the list information by the client terminal, a unit that calculates a content of the controlled substance that is included in the designed component when the material of the selected material name is applied to the designed component, and a unit that outputs the calculated content of the controlled substance as evaluation information of the designed component.
